PROJECTS

Customer Churn Prediction | *Python, TensorFlow, Streamlit*　　　　　　March 2024
  * The app allows users to input customer details to predict churn probability using a pre-trained model.
  * Encoders (for categorical data) and a scaler (for numerical data) are used to preprocess the inputs before making predictions
  * Based on the predicted churn probability, the app informs whether the customer is likely or unlikely to churn .

DataEagle — Exploratory Data Analysis Project | *Python*　　　　　　September 2023
  * Analyzes sales data using NumPy, Pandas and Matplotlib.
  * Reveals sales trends, regional variations, and customer behaviors
  * Identifies high-performing products and target customer segments.
  * Offers actionable insights to enhance customer experience.

Basic Banking System — Dynamic Website Project | *HTML, CSS, JavaScript*　　　June 2023 – July 2023
  * Internship Project @The Sparks Foundation
  * Enables hassle-free money transfers between customers without login or user creation.
  * Features include viewing all customers, selecting and viewing individual customers, and transferring money.
  * Utilizes HTML, CSS, and JavaScript technologies for smooth functionality.
  * Designed to provide a straightforward banking solution for secure and efficient transactions.
